Contributions should, preferably, be sent to a member of the Advisory Editorial Board who is familiar with the research reported, or to one of the Editors:

A.D. BUCKINGHAM, F.R.S.
Editor of Chemical Physics Letters
University Chemical Laboratory
Lensfield Road
Cambridge CB2 1EW, UK

R.B. BERNSTEIN
Editor of Chemical Physics Letters
Department of Chemistry, University of California, Los Angeles
405 Hilgard Avenue
Los Angeles, CA 90024, USA

*Important: please adhere to instructions to authors, to be found on the last page of each volume.*

Chemical Physics Letters is published weekly. For 1987, 11 volumes (66 issues) have been announced. The subscription price for these volumes is Dfl. 4290.00 (US$ 2145.00). Postage and handling amount to Dfl. 275.00 (US$ 137.50). Therefore the total price for 1987 is Dfl. 4565.00 (US $2282.50). The Dutch guilder price is definitive, dollar prices are for guidance only. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller. For personal rates and conditions please contact the Publisher.

Elsevier Science Publishers B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
*Special regulations for authors.* Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
*Special regulations for readers in the USA.* This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copyright of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US$ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purpose, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

## LIST OF ADVISORY EDITORS

Professor E.R. Andrew, F.R.S., Department of Physics, University of Florida, Gainesville, FL 32611, USA

Professor V. Aquilanti, Dipartimento di Chimica dell'Università, via Elce di Sotto 8, 06100 Perugia, Italy

Professor N.M. Atherton, Department of Chemistry, The University, Sheffield S3 7HF, UK

Dr. D.J. Auerbach, IBM, Almaden Research Center, 650 Harry Road, K 31/802, San Jose, CA 95120-6099, USA

Professor J.L. Beauchamp, A.A. Noyes Laboratory of Chemical Physics 127-72, California Institute of Technology, Pasadena, CA 91125, USA

Dr. V.E. Bondybey, Department of Chemistry, Ohio State University, 120 West 18th Avenue, Columbus, OH 43210, USA

Dr. P.R. Bunker, Herzberg Institute of Astrophysics, National Research Council of Canada, Ottawa, Ontario, Canada K1A 0R6

Professor L.S. Cederbaum, Theoretische Chemie, Institut für Physikalische Chemie, Universität Heidelberg, Im Neuenheimer Feld 253, D-6900 Heidelberg, Germany

Dr. M.S. Child, Department of Theoretical Chemistry, 1 South Parks Road, Oxford OX1 3TG, UK

Professor D.P. Craig, F.R.S., Research School of Chemistry, Australian National University, Canberra, A.C.T. 2601, Australia

Professor A. Dalgarno, F.R.S., Harvard College Observatory and Smithsonian Astrophysical Observatory, 60 Garden Street, Cambridge, MA 02138, USA

Professor Dr. W. Demtröder, Fachbereich Physik, Universität Kaiserslautern, D-6750 Kaiserslautern, Germany

Professor R.N. Dixon, F.R.S., Department of Theoretical Chemistry, School of Chemistry, University of Bristol, Cantock's Close, Bristol BS8 1TS, UK

Professor J. Durup, Laboratoire de Physique Quantique, 118 route de Narbonne, 31062 Toulouse Cedex, France

Professor K.B. Eisenthal, Department of Chemistry, Columbia University, Havemeyer Hall, 116th Street and Broadway, New York, NY 10027, USA

Professor J.E. Enderby, F.R.S., Institut Laue–Langevin, 156X, 38042 Grenoble Cedex, France

Professor Dr. R.R. Ernst, Laboratorium für Physikalische Chemie, ETH Zentrum, CH-8092 Zurich, Switzerland

Professor M.D. Fayer, Department of Chemistry, Stanford University, Stanford, CA 94305, USA

Professor G.W. Flynn, Columbia Radiation Laboratory, Department of Physics, Columbia University, 538 West 120th Street, New York, NY 10027, USA

Professor T.E. Furtak, Department of Physics, Colorado School of Mines, Golden, CO 80401, USA

LIST OF ADVISORY EDITORS

Professor W.M. Gelbart, Department of Chemistry and Biochemistry, University of California, Los Angeles, CA 90024, USA

Academician Professor V.I. Goldanskii, Institute of Chemical Physics, Academy of Sciences of the USSR, Ulitsa Kossygina 4, 117334 Moscow, USSR

Dr. D.M. Golden, Director, Department of Chemical Kinetics, SRI International, 333 Ravenswood Avenue, Menlo Park, CA 94025, USA

Professor L. Goodman, School of Chemistry, Wright and Rieman Chemical Laboratories, Rutgers State University, New Brunswick, NJ 08903, USA

Professor Dr. Z.R. Grabowski, Institute of Physical Chemistry, Polish Academy of Sciences, 44/52 Kasprzaka, Warsaw 42, Poland

Professor D. Hadži, Kemijski Institut "Boris Kidrič", Hajdrihova 19, YU-61001 Ljubljana, Yugoslavia

Dr. N.C. Handy, University Chemical Laboratory, Lensfield Road, Cambridge CB2 1EW, UK

Professor Y. Hatano, Department of Chemistry, Tokyo Institute of Technology, O-okayama, Meguro-ku, Tokyo 152, Japan

Dr. Z. Herman, J. Heyrovský Institute of Physical Chemistry and Electrochemistry, Czechoslovak Academy of Sciences, Máchova 7, 121 38 Prague 2, Czechoslovakia

Professor R.M. Hochstrasser, Department of Chemistry/D5, University of Pennsylvania, Philadelphia, PA 19104, USA

Professor Dr. G.L. Hofacker, Lehrstuhl für Theoretische Chemie, Technische Universität München, Lichtenbergstrasse 4, D-8046 Garching near Munich, Germany

Dr. B.J. Howard, Physical Chemistry Laboratory, Oxford University, South Parks Road, Oxford OX1 3QZ, UK

Professor M. Ito, Department of Chemistry, Faculty of Science, Tohoku University, Sendai 980, Japan

Professor C.K. Jørgensen, Département de Chimie Minérale, Analytique et Appliquée, 30 Quai Ansermet, CH-1211 Geneva 4, Switzerland

Professor J. Jortner, Institute of Chemistry, Tel-Aviv University, 61390 Ramat Aviv, Tel Aviv, Israel

Professor Dr. W. Kaiser, Fakultät für Physik der Technischen Universität München, Arcisstrasse 21, D-8000 Munich 2, Germany

Professor Dr. E.E. Koch, Fritz-Haber-Institut der Max-Planck-Gesellschaft, Faradayweg 4–6, D-1000 Berlin 33, Germany

Professor W. Kołos, Department of Theoretical Chemistry, University of Warsaw, ul. Pasteura 1, Warsaw 22, Poland

Professor K. Kuchitsu, Department of Chemistry, Faculty of Science, The University of Tokyo, Bunkyo-ku, Tokyo 113, Japan

Professor S. Leach, Laboratoire de Photophysique Moléculaire, Bâtiment 213, Université de Paris-Sud, 91405 Orsay, France

Professor Y.T. Lee, Lawrence Berkeley Laboratory, University of California, 1 Cyclotron Road, Berkeley, CA 94720, USA

LIST OF ADVISORY EDITORS

Professor S.R. Leone, Division of Chemistry, Joint Institute for Laboratory Astrophysics, Campus Box 440, University of Colorado, Boulder, CO 80309, USA

Professor R.J. Le Roy, Guelph-Waterloo Centre for Graduate Work in Chemistry, University of Waterloo, Waterloo, Ontario, Canada N2L 3G1

Professor R.D. Levine, Department of Physical Chemistry, The Hebrew University of Jerusalem, Jerusalem 91904, Israel

Professor W.C. Lineberger, Department of Chemistry and JILA, Box 440, University of Colorado, Boulder, CO 80309, USA

Professor E. Lippmaa, Institute of Chemical Physics and Biophysics, Estonian Academy of Sciences, Lenini puiestee 10, 200001 Tallinn, USSR

Professor Dr. J.P. Maier, Physikalisch-Chemisches Institut der Universität Basel, Klingelbergstrasse 80, CH-4056 Basel, Switzerland

Professor R.A. Marcus, Department of Chemistry, Noyes Laboratory, California Institute of Technology, Pasadena, CA 91125, USA

Professor S.F. Mason, F.R.S., Department of Chemistry, University of London, King's College, Strand, London WC2R 2LS, UK

Professor C.A. McDowell, Department of Chemistry, University of British Columbia, 2036 Main Mall, Vancouver 8, British Columbia, Canada V6T 1Y6

Professor H. Metiu, Department of Chemistry, University of California, Santa Barbara, CA 93106, USA

Professor W.H. Miller, Department of Chemistry, University of California, Berkeley, CA 94720, USA

Professor Yu.N. Molin, Institute of Chemical Kinetics and Combustion, Academy of Sciences, 630090 Novosibirsk, V-334, USSR

Professor K. Morokuma, Institute for Molecular Science, Myodaiji, Okazaki 444, Japan

Professor J.N. Murrell, School of Molecular Science, University of Sussex, Brighton BN1 9QJ, UK

Professor S. Nagakura, Institute for Molecular Science, Myodaiji, Okazaki 444, Japan

Professor E.E. Nikitin, Institute of Chemical Physics, Academy of Sciences, Vorobyevskoye chaussée 2b, 117334 Moscow, V-334, USSR

Professor N.Y. Öhrn, Department of Chemistry, Quantum Theory Project, 363 Williamson Hall, University of Florida, Gainesville, FL 32611, USA

Professor D. Phillips, The Royal Institution, 21 Albemarle Street, London W1X 4BS, UK

Professor A. Pines, Department of Chemistry, University of California, Berkeley, CA 94720, USA

# Fractals in Physics

Proceedings of the Sixth Trieste International Symposium on Fractals in Physics, ICTP, Trieste, Italy, July 9–12, 1985

*edited by*

LUCIANO PIETRONERO

*and*

ERIO TOSATTI

1986 xii + 476 pages Price: US $55.50/Dfl. 150.00
ISBN 0-444-86995-6

This volume contains the proceedings of the International Trieste Symposium on 'Fractals in Physics', held in July 1985.

The concepts of self-similarity and scale invariance have arisen independently in several areas. One is the study of the critical properties of phase transitions; another is fractal geometry, which involves the concept of (non-integer) fractal dimension. These two areas have now come together, and their methods have extended to various fields of physics. The purpose of this Symposium was to provide an overview of the physical phenomena that manifest scale invariance and fractal properties with the aim of bringing out the common mathematical features. The emphasis was on theoretical and experimental work related to well defined physical phenomena.

The majority of the contributions presented are concerned with the study of the physics underlying irreversible phenomena that generate fractal structures. This area, called 'Kinetic Critical Phenomena' represents one of the most challenging fields in today's theoretical physics.

The resulting proceedings present a complete and up-to-date coverage of this area which has undergone rapid growth in the last few years.

*CONTENTS (summary of);*
Preface. Parts: I. General Properties of Fractals. II. Analysis of Fractal Properties of Materials. III. Polymer Statistics and Self-Avoiding-Walks. IV. Branched Polymers, Gelation and Percolation. V. (A) Irreversible Growth Models: Laplacian Fractals, Dielectric Breakdown, Fracture Propagation and Viscous Fingers in Liquids. Part V. (B) Irreversible Growth Models: Diffusion-Limited Aggregation, Dendritic Growth, Eden Model and Cluster-Cluster Aggregation. Part VI. Kinetics of Clustering. VII. Dynamical Properties of Fractal Structures. VIII. Hierarchical and Fractal Features of Disordered Systems. IX. Chaos, Turbulence and Related Topics. Author Index.

# FERROMAGNETIC MATERIALS

## A Handbook on the Properties of Magnetically Ordered Substances

*edited by* **E.P. WOHLFARTH**

This Handbook will be the most comprehensive work to date on the subject of ferromagnetic materials. As a work of reference, it aims to encompass the achievements both of earlier compilations of tables and of earlier monographs.

The articles are written by leading authorities active in research and development. Each article concentrates on a description of material properties in graphical and tabular form, discussed in a broad background of the physics, chemistry, metallurgy, structure, and, to a lesser extent, engineering aspects of these properties.

This impressive work is intended to replace the classical and monumental work on Ferro-magnetism by *Bozorth*, published some 30 years ago. As such, it will be of great value to industrial researchers and technologists. University departments of pure and applied physics, chemistry, metallurgy, and electrical engineering will also welcome the publication of this Handbook.

**A COMMENT FROM THE PRESS:**

*"...these volumes will be the most comprehensive work to date on the subject of ferromagnetism... wherever the experimentalists are playing, they will find these volumes a must..."*

**Physics Today**

**Volume 1**
1980 x + 634 pages
Price: US $129.00/Dfl. 290.00 ISBN 0-444-85311-1

**CONTENTS:** *Chapters:* 1. Iron, Cobalt and Nickel *(E.P. Wohlfarth).* 2. Dilute Transition Metal Alloys: Spin Glasses *(J.A. Mydosh and G.J. Nieuwenhuys).* 3. Rare Earth Metals and Alloys *(S. Legvold).* 4. Rare Earth Compounds *(K.H.J. Buschow).* 5. Actinide Elements and Compounds *(W. Trzebiatowski).* 6. Amorphous Ferromagnets *(F.E. Luborsky).* 7. Magnetostrictive Rare Earth -$Fe_2$Compounds *(A.E. Clark).* Author Index. Subject Index. Materials Index.

**Volume 2**
1980 x + 592 pages
Price: US $135.50/Dfl. 305.00 ISBN 0-444-85312-x

**CONTENTS:** *Chapters:* 1. Ferromagnetic Insulators: Garnets *(M.A. Gilleo).* 2. Soft Magnetic Metallic Materials *(G.Y. Chin and J.H. Wernick).* 3. Ferrites for Non Microwave Applications *(P.I. Slick).* 4. Microwave Ferrites *(J. Nicolas).* 5. Crystalline Films for Bubbles *(A.H. Eschenfelder).* 6. Amorphous Films for Bubbles *(A.H. Eschenfelder).* 7. Recording Materials *(G. Bate).* 8. Ferromagnetic Liquids *(S.W. Charles and J. Popplewell).* Author Index. Subject Index. Materials Index.

**Volume 3**
1982 x + 836 pages
Price: US $180.00/Dfl. 405.00 ISBN 0-444-86378-8

**CONTENTS:** Preface. 1. Magnetism and Magnetic Materials: Historical Developments and Present Role in Industry and Technology *(U. Enz).* 2. Permanent Magnets; Theory *(H. Zijlstra).* 3. The Structure and Properties of Alnico Permanent Magnet Alloys *(R.A. McCurrie).* 4. Oxide Spinels *(S. Krupička and P. Novák).* 5. Fundamental Properties of Hexagonal Ferrites *(H. Kojimo).* 6. Properties of Ferroxplana-Type Hexagonal Ferrites *(M. Sugimoto).* 7. Hard Ferrites and Plastoferrites *(H. Stäblein).* 8. Sulphospinels *(R.P. van Stapele).* 9. Transport Properties of Ferromagnets *(I.A. Campbell and A. Fert).* Author Index. Subject Index. Materials Index.

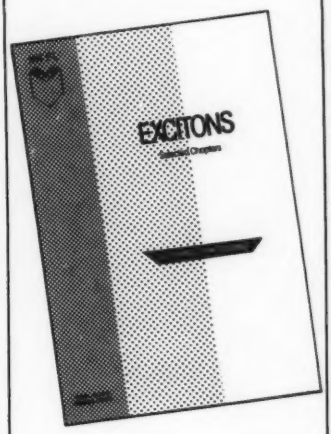
NORTH-HOLLAND
PERSONAL LIBRARY



**A comment from the press on the unabridged edition:**

*"The quality of the articles is uniformly high . . . The editors have brought together so many aspects of exciton physics that all those with an interest in the subject are bound to find not only useful reviews of their own speciality, but interesting insights into related fields. This volume augurs well for the rest of the series . . ."*

*(Nature)*

**A series of reasonably priced monographs and contributed volumes intended for the individual physicist and materials scientist.**

# EXCITONS

**Selected Chapters**
from the book **"Excitons"**, volume 2 in the series Modern Problems in Condensed Matter Sciences

*edited by* **E.I. Rashba** *and* **M.D. Sturge**

1987 x+ 486 pages (paperback)
Price: US $ 36.00/Dfl.95.00 ISBN 0-444-87052-0

This paperback edition of a volume originally published in 1982 contains a selection of chapters which offer a thorough introduction to the field of excitons. The chapters were selected by the Editors with the needs of graduate students and experienced research scientists wishing to enter this field in mind. The resulting text should be equally suitable for individual study and for organized courses and study groups. An extended bibliography and indices including references to chapters printed only in the hard-bound edition make the selection a useful reference book. The book emphasises the underlying unity of the subject, trespassing the artificial educational and semantic barriers which often separate chemists from physicists.

The book consists of separate, self-contained chapters written by prominent experts in the USSR, USA and Japan covering the fundamentals of exciton theory and the salient experimental results. It presents an authoritative and thorough treatment of the subject by leading researchers in their particular fields and includes recent advances.

*Contents:* Preface. *Chapters:* 1. Introduction *(M.D. Sturge)*. 2. Electrodynamic and non-local optical effects mediated by exciton polaritons *(J.L. Birman)*. 3. Investigation of exciton-polariton dispension using laser techniques *(E. Koteles)*. 4. Spatial dispersion effects in the exciton resonance region *(E.L. Ivchenko)*. 5. Exciton electro-optics *(A.G. Aronov and A.I. Ioselevich)*. 6. Free many particle electron-hole complexes in an indirect gap semiconductor *(V.B. Timofeev)*. 7. Self-trapping of excitons *(E.I. Rashba)*. 8. Excitons in magnetic insultors *(Y. Tanabe and K. Aoyagi)*. 9. Vibrational Frenkel excitons *(M.V. Belousov)*. Bibliography. Author index. Subject index.

ENRICO FERMI INTERNATIONAL SUMMER SCHOOL OF PHYSICS, Volume 97

# Molecular-Dynamics Simulation of Statistical-Mechanical Systems

*edited by* **G. Ciccotti** *and* **W.G. Hoover**

1987 IXV + 610 pages Price: US $ 155.50/Dfl.350.00 ISBN 0-444-87033-4
Subscription Price: US $ 132.50/Dfl.297.50

With realistic simulations replacing cruder approximations, it has become possible to treat a much broader range of physical problems. Today the methods described in 1957 have led to detailed understanding not only of melting, but also a host of polymorphic, rotational and electronic phase transformations. The papers presented at this Enrico Fermi school by prominent physicists survey these developments. The contents can be divided into five part as follows:-

- history and fundamentals;
- equilibrium MD;
- free energy computations and new equilibrium MD;
- nonequilibrium MD, kinetic theory and rigorous results;
- molecular systems.

*Contents:* Foreword (*G. Ciccotti and W.G. Hoover*). **Part I - History and Fundamentals.** Early history of computer simulations in statistical mechanics (*W.W. Wood*). Ordered and chaotic motions in dynamical systems with many degrees of freedom (*G. Benettin*). **Part II – Equilibrium MD.** Practical algorithms for dynamic simulations (*H.J.C. Berendsen and W.F. van Gunsteren*). Molecular-dynamics simulations (*B.J. Alder*). Reaction rate calculations via transmission coefficients (*M.D. Feit and B.J. Alder*). Molecular-dynamics simulation of Coulomb systems in two and three dimensions (*J.-P. Hansen*). Computer simulations of two- and quasi-two-dimensional atomic systems (*F.F. Abraham*). **Part III – Free Energy Computations and New Equilibrium MD.** Free-energy computation and first-order phase transitions (*D. Frenkel*). Defect calculations beyond the harmonic model (*G. Jacucci*). Molecular-dynamics study of crystal structure transformations (*M. Parrinello*). **Part IV – Nonequilibrium MD, Kinetic Theory and Rigorous Results.** Nonequilibrium molecular dynamics (*D.J. Evans*). Simulations of vibrational relaxation in dense molecular fluids (*B.L. Holian*). Recent results in the kinetic theory of hard-sphere systems (*J.R. Dorfman and T.R. Kirkpatrick*). Some theoretical aspects of nonequilibrium simulation methods (*J.W. Dufty, J.J. Brey and A. Santos*). Exact results in kinetic theory (*H. Spohn*). Round-table: perspectives in nonequilibrium molecular dynamics (*H.J.M. Hanley*). **Part V – Molecular Systems.** The method of constraints in molecular dynamics. General aspects and application to chain molecules (*J.P. Ryckaert*). Molecular liquids: orientational order and dielectric properties (*I.R. McDonald*). Simulation of properties of spectroscopic interest (*P.A. Madden*). Computer simulation of water and ionic solutions: what can we learn? (*R.W. Impey*). Molecular-dynamics study of several atomic solutes in water (*K. Watanabe and H.C. Andersen*). Structure and dynamics of molecular crystals (*M.L. Klein*). Molecular-dynamics study of orientational order in a plastic crystal. High-temperature phase of adamantane (*M. Meyer*). Biological molecules and membranes (*H.J.C. Berendsen*). **Part VI – Materials Science.** Atomistic simulations in materials science (*S. Yip*). Round-table: perspectives in materials science (*V. Pontikis*). **Part VII – Quantum Problems and New Computers.** The simulation of liquid helium (*D.M. Ceperley*). A numerical approach to the theory of strong interactions (*E. Marinari*). Round-table: perspectives in computations (*C. Moser*). **Part VIII – Conclusions.** Synopsis of the school and final remarks (*A. Bellemans*).
